HTTP Status Lookup — Report

Research findings

HTTP status code **418** means **“I’m a teapot”**: the server refuses to brew coffee because it is, permanently, a teapot. It was originally an April Fools’ joke defined in **RFC 2324** (*Hyper Text Coffee Pot Control Protocol, HTCPCP/1.0*, 1998) and is now reserved as an error code in **RFC 9110** (*HTTP Semantics*, 2022).

What I built

`/workspace/app` contains `index.html` and `app.js`: an “HTTP status lookup” page with a text input and a button. It supports 12 common codes (200, 201, 204, 301, 302, 304, 400, 401, 403, 404, 418, 500, 503) and shows the code’s name and a one-line meaning. Served in the background with `python3 -m http.server 8000`.

Test result

Opened http://localhost:8000 in the browser, typed `418`, clicked “Look up”. The page displayed:

> **418 I’m a teapot** The server refuses to brew coffee because it is, permanently, a teapot (RFC 2324, reserved in RFC 9110).

Screenshot saved at `/workspace/screenshot.png`.
